Software Engineer – Python, AI Systems, Data Pipelines, Full-Stack Product Development

Experience

Software Engineer, AI Research Infrastructure

Remote

Plato – Applied Research Lab for Agent Training and Evaluation

Nov. 2025 – Present

- Build and evaluate containerized replicas of real software workflows that serve as reinforcement-learning environments for training and benchmarking computer-use agents
- Operate and improve AI-agent pipelines that research applications, configure Docker/SQL environments, generate realistic state, and iteratively repair environment and data failures
- Review and triage a portfolio of 250+ application simulators, diagnosing authentication, API, database, UI, reset, and mutation-tracking failures; implement fixes and direct coding agents with precise feedback
- Develop Python/CLI automation and validation workflows using Playwright, PostgreSQL/MySQL audit hooks, health checks, and reproducible snapshots; contribute fixes through Git-based reviews

Independent Product Engineer (Part-Time)

Vancouver, BC

Interactive Products, Creative Technology, and Automation

Jan. 2023 – Present

- Own end-to-end delivery across 7+ commissioned digital products, translating ambiguous design concepts into deployed software through architecture, rapid prototyping, implementation, and iteration
- Build technically ambitious web experiences with Three.js/WebGL, GLTF models, responsive interaction, scroll-driven animation, synchronized media, and custom designer-facing tooling
- Delivered a QR-accessible interactive installation for a major museum, including a Python service that publishes live creative output to cloud storage with cache control and unattended recovery
- Ship AI-enabled creative tools and business automation using Node.js, OpenAI APIs, Python, Google APIs, and pandas; production workflows have operated for 3+ years

Data Analyst, Consultant

Vancouver, BC

BC College of Nurses and Midwives

Oct. 2023 – Dec. 2023

- Replaced a manual healthcare data workflow with an automated pipeline for validating source files, processing records, and generating reports
- Standardized input schemas and performed quality control on datasets containing thousands of regulated candidate records

Open Source Learning Facilities Project Assistant

Vancouver, BC

University of British Columbia

May 2022 – April 2023

- Built Python and Plotly Dash learning tools, migrated R/MATLAB workflows to Python, and supported course materials used by 1,500+ students annually

Selected Projects

Smart Swimming Performance Analyzer

2025

UBC Capstone with FORM Swim – github.com/IddoSadeh/FORM24

- Built an ESP32/IMU wearable and Python processing pipeline; implemented ML-based stroke-rate detection from noisy sensor data

AI-Powered 3D Typography Generator

2024

github.com/IddoSadeh/TypoScop

- Built a Node.js web app that uses OpenAI function calling to control real-time Three.js typography visualizations

Technical Skills

- **Engineering:** Python, JavaScript, SQL, Node.js, React, REST APIs, PostgreSQL/MySQL, Docker, Playwright, Git, Linux
- **AI & Data:** RL environments, computer-use agent evaluation, task and data generation, coding-agent workflows, structured LLM outputs, pandas, NumPy
- **Tools & Cloud:** Claude Code, Codex, Cursor, AWS, DigitalOcean, Render, Plotly Dash, Jupyter

Education

University of British Columbia

Vancouver, BC

Bachelor of Applied Science in Biomedical Engineering, Bioinformatics

Sept. 2021 – April 2025

- Coursework in machine learning, algorithms, databases, statistics, and software systems
